

TCTC Group

28th September - World Rabies Day

World Rabies Day is celebrated annually to raise awareness of rabies prevention and to highlight progress in defeating this horrific disease. The date of World Rabies Day awareness also marks the anniversary of Louis Pasteur's death, the French chemist and microbiologist, who developed the first rabies vaccine.

Today, safe and efficacious animal and human vaccines are among the important tools that exist to eliminate human deaths from rabies - without clinical research this would not be possible.

TCTC Group have extensive vaccine clinical trial experience. We are experts in advanced therapies and successfully executed clinical trials for the first Gene therapy to be approved in the Western world.

TCTC Group is a privately owned full-service clinical research provider specialized in bringing products with unique clinical, medical and regulatory complexities to market. In addition to offering full-service clinical trial solutions, the group includes independent divisions specialized in quality assurance, medical writing and regulatory affairs, project and site management, staffing and training services.
